

Claims:

1. A mortar tile being characterized in that a photocatalyst is added to a mortar and, thereafter, the pressure-forming is performed at a pressure which allows the formation of open pores in a surface of the mortar.
2. A mortar tile being characterized in that a formed article is formed by adding a photocatalyst to a mortar and, thereafter, by performing the pressure-forming at a pressure which allows the formation of open pores in a surface thereof, and a photocatalyst is applied to a surface of the formed article.
3. A manufacturing method of a mortar tile being characterized in that a mortar which is molded in a tile shape is manufactured by adding a photocatalyst to the mortar and, thereafter, by performing the pressure-forming at a pressure which allows the formation of open pores in a surface of the mortar.
4. A manufacturing method of a mortar tile being characterized in that a mortar which is molded in a tile shape is manufactured by forming a formed article in a state that a photocatalyst is added to the mortar and, thereafter, the pressure-forming is performed at a pressure which allows the formation of open pores in a surface thereof, and a photocatalyst is applied to a surface of the formed article.
